

PUMA 2100/2600/3100 series

High-Performance Turning Center

Doosan Machine Tools

Optimal Solutions for the Future

High-Performance Turning Center

PUMA 2100/2600/3100 series has been developed to create full line up of high level 8" to 12" size with model variations from 2 axis to Y axis and sub spindle.

NEW PUMA series

High Performance

These Doosan machines offer a high level of machining capability to provide optimum productivity for the customer.

PUMA 2100/2600/3100 series

Rigid Bed

Today's high speed / high acceleration, deceleration feed drives impose severe impact forces on the machine tool structure. This causes low frequency / large amplitude vibration which can cause deterioration in surface finish and contour definition during finish machining. Doosan's enhanced structural stability reduces the effects of vibration and provides the optimum conditions for producing unsurpassed workpiece quality.

Larger than previous

Max. **158 %**
(PUMA 2100 / 2600)

Max. **154 %**
(PUMA 3100)

Bed guide way width

For structural stability, the guide way width and span are enlarged by 25%~50%, so that high precision in cutting is ensured.

Stiffness

Static and Dynamic rigidity of the new PUMA 2100/2600/3100 machines have been enhanced in structural analysis compared with the previous model.

Guide way deformation

Static stiffness is **3 times** higher than previous

• PUMA 2100SY core machine

Main Spindle

Increased mounting area of headstock base to the bed

The spindle headstock has increased rigidity due to the wide surface contact between the headstock and bed way for Heavy duty cutting, Optimum surface finish, High cutting speeds, Highly accurate roundness.

larger area than previous

Max. **190 %**
(in the same class)

Sub Spindle

Mounting base area is

50 % ~ 94 %

larger than previous

Previous Model
135 / 170 mm
(5.3 / 6.7 inch)

Chuck size

PUMA 2100 / 2600
175 mm
(6.88 inch)

Tooling System (On Turn-Milling)

The turret accommodates BMT55P or BMT65P tooling in which the toolholders are mounted directly to the turret's periphery with 4 large bolts. This type of mounting system BMT55P is standard on PUMA2100 turn-milling models and BMT65P is standard on PUMA2600 and PUMA3100 turn-milling models. BMT65P is available on PUMA2100 as an option.

Max. rotary tool spindle speed
5000 r/min

Max. rotary tool spindle power
5.5 kW (7.3 Hp), 15 min.
{7.5 kW (10.1 Hp), 5 min.} opt.

Max. rotary tool spindle torque
47 N·m (34.6 ft-lbs)
{95.5 N·m (70.4 ft-lbs)} opt.

Saddle

The broad width and long contact span of the saddle slideway ensures stability of the support structure. This coupled with the optimised spindle and bed design provides heavy duty and accurate machining capability.

Saddle guide width and span are increased in a range from
Max. **30 % to 46 %**
compared with previous

Machining Capacity

More powerful revolving motor is adapted to improve the productivity.

Heat elimination layout

One very important design concept is to reduce the effects of heat sources in the machine. Heat shields and fan motors are used to prevent the transmission of heat to the machine structure.

Coolant chiller opt.

Thermal displacement and dimensional accuracy are greatly influenced by oil temperature in a machine. Coolant Temperature Control unit prevents the coolant from heating. Especially, when using oil-based coolant, the oil temperature can become extremely high.

* Please contact Doosan in these cases

Inertia estimates function for C-axis std.

This function can estimate the C-axis inertia which is affected by variation in workpiece weight. It is possible to optimise the Velocity Gain and Acc/Dec Time Constant and therefore improve the C-axis accuracy.

Wide Variation

A wide variety of machine specifications from 2-axis models to turning centers with sub spindles is available to meet your production requirements.

Unit : mm (inch)

Main spindle

To achieve a high level of stability during machining, improvements in rigidity have been the main focus in the design process. The mounting areas of main and Sub-spindles have been significantly widened and the spindle length shortened to minimise vibration. Spindle bearing diameter has been increased to improve rigidity. This also allows a larger through bore size for the sub-spindle. Spindles are available as belt type or built-in motor type.

Power & torque of spindle

Model	Speed (r/min)	Power [kW (Hp)]	Max. Torque [N·m (ft-lbs)]
PUMA 2100	4500	std. 18.5 (24.8)	183 (135.1)
	5000 [Built-in]	opt. 22 (29.5)	358 (264.2)

Rotary tool power torque diagram

Virtual Y-axis function

In the Y-axis plane, tools can move in a plus or minus direction perpendicular to the Z-axis and spindle center line. Viewed from the operator's perspective, this Y-axis motion is toward or away from the door of the machine while X-axis moves from floor to ceiling.

Y-axis enables various shape of cutting. Y-axis is realized virtually by the linear interpolation and synchronous movement of X1 and X2-axis that make it possible to lower machine height for stability.

Y-axis travel

PUMA 2100 / 2600

Bed slant angle	30°	30°
X slant angle	30°	30°
X-Y slant angle	30°	30°
Y-axis travel	± 52.5 mm (± 2.1 inch)	± 65.0 mm (± 2.6 inch)

All enough in single setup

Simultaneous XYZ motion provides the capability milling complex shapes. In addition, the rigidly clamped C-axis disc brake enables heavy duty and precision machining.

On-center face groove

Poly-side machine

Off-center side groove

Y&X-axis circular interpolation

Improved Maintainability

Maintainability is one of the crucial criteria that Doosan placed at the forefront of machine development. Large openings in the machine paneling facilitate access to the underlying maintenance units like lubricant oil tank and pneumatic fittings.

PUMA 2100/2600/3100 series

Easy to Access for Maintenance

By new machine cover design concept, maintenance locations are easily seen, and wider openings allow easier access.

The coolant tank can be pulled out at the front and does not require the chip conveyor to be removed.

Fully Wrapped Machine

To minimize the thermal effect on the machine, heat of chips should be prevented from being transmitted to bed and guide ways. Guide ways are fully covered so that heat can be isolated. Also, telescopic covers have strengthened linkage system that ensures durability.
(only PUMA 2100/2600)

Power Saving Function

Automatic machine light turns off

This is smart function that can turn off the machine light automatically when no user touches key board of operation panel during specified time.

Automatic machine sleep

If CNC operator's panel has not been used for a time, the motors for spindle, servo axis, coolant pump and chip conveyor etc. are powered off automatically. It is effective to reduce standby power. Save up stand by power from 10 to 14%.

EZ Function

This function is to support simple setting of Tool Setter and improve the function to set tail stock position automatically with recorded tail stock position.

EZ automatic tail stock function

This function enables the position setting of tail stock automatically. In programmable tail stock, the Z-axis position of tail stock is recorded automatically as the clamped position of tail stock. When tail stock needs to move to the other position, Z-axis moves to the pre-recorded position of Z-axis and tail stock unclamps by the button operation of OP pane.

EZ tool setter function

This is specially designed for improving the efficiency of CNC turning center. If a user selects target tool to be checked by Tool Setter in manual mode, its moving axis is advanced forward to make the setter easy to touch off the tools, and the axis moves backward after touching the tool automatically.

Easy Operation Package

These DOOSAN software packages have been customized to provide user-friendly functions.

Programming

G Code list

Operator can check the meaning of each G-code.

M Code list

Operator can check the meaning of each M-code.

Calculator

Operator can calculate numerical formula in relation to arc and hole easily.

Servo tailstock thrust setting

Thrust force control is simple to set up using the specially designed servo-driven tail stock thrust setting software.

- Input value directly
- Select one of the initially set values

Operation / Maintenance

Tool load monitor 

The main function of this software is to detect overload when a tool is wrong, and change it to an other tool. Stop machine to protect a tool holder and next tools by detecting overload caused by tool breakage or its wear. Use editable tool life management for spare tools. Monitor load meter for all spindles and axes. If the tool load reaches abnormal band recorded in "Set data", the software issues an feed hold alarm or skips the tool.

Operation rate - user log in

A major determinant of efficiency is the cost associated with setting up the equipment to make a particular product. This software can be used to manage machine operation rate of 3 operators. Total machine operation and real machining time for a month can be recorded and measured. It helps to evaluate and monitor each operational efficiency. To keep it secure, Password setting is essential.

Back up custom data

This can be used to record tool load information detected in "Tool load monitor" for all tools used during cutting. By reloading recorded data in tool table, Tool Load Monitor software can compare the actual tool load with a recorded load pattern.

Turret recovery help

The software is to help users recover turret step by step from trouble situation where it does not work. It can quickly recover your valuable machine.

Easy Guide i

Operation Guidance, which supports entire operations on an all-in-one screen for daily machining including creating a program on the machine.

- Uses one display screen to perform all operations including programming, checking by animation, and real machining.
- User-Friendly Operation : Soft key selection of comprehensive cycle library
- Easy programming Based on ISO-code program format, complex machining motions can be created easily by this menu format.

- Machine status window Machine status such as actual position, feedrate and load meter are always displayed.
- Realistic machining simulation 3-D solid model machining simulation is available.
- Intuitive menu selecting Menu can be selected easily and intuitively by soft-keys with icons.

Cycle machining menus for both of lathe machining and milling are available

 Programming time can be reduced

[] : Option

Standard feature

- Hydraulic power unit
- Lubrication equipment
- Coolant supply equipment
- Front guard door interlock
- Hydraulic chuck & actuating cylinder
- Soft jaws • Foot switch
- Standard tool kit (tool holder & boring sleeve)
- Work light • Manuals
- Levelling jack screw & plates
- Hand tool kit (including small tool for operations)
- Safety precaution name plates

Optional feature

- Additional tool holder & sleeves
- Air blast for chuck jaw cleaning
- Air gun
- Automatic door with safety device
- Bar feeder interface
- Dual chucking pressure
- Hardened & ground jaws
- Pressure switch for chucking pressure check
- High pressure coolant
- Oil skimmer
- Chip conveyor
- Chip bucket
- Programmable tail stock
- Servo driven tail stock
- Signal tower (yellow, red, green)
- Tail stock quill for dead center
- Tool pre-setter (Automatic type)
- Tool pre-setter (Manual type)
- Work ejector
- Parts catcher
- Parts conveyor
- Controller : Fanuc 31i

• The specifications and information above-mentioned may be changed without prior notice.
• For more details, please contact Doosan

NC Unit Specifications

Fanuc 31i

AXES CONTROL

- Controlled path	1 path [2 path]
- Controlled axes	X, Z, C, Y [C2, B]
- Simultaneous controlled axes	4 axes
- Angular axis control	
- Axis control by PMC	
- Backlash compensation	0 ~ ±9999 pulses
- Backlash compensation for each rapid traverse and cutting feed	
- Chamfering on / off	
- Cs contouring control	
- HRV2 control	
- Least input command	0.001 / 0.0001 mm/inch
- Machine lock	All axis / each axis
- Mirror image	
- Overtravel	
- Position switch	
- Stored pitch error compensation	
- Stored stroke check 1	
- Torque control	
- Interference check for rotary area	
- Unexpected disturbance torque detection function	

OPERATION

- Automatic operation (memory)	
- MDI operation	
- DNC Operation with Memory card	
- Buffer register	
- Dry run	
- Handle incremental feed	X1, X10, X100
- Program restart	
- Wrong operation prevention	
- JOG feed	
- Manual handle feed	1 unit
- Manual intervention and return	
- Manual pulse generator	1 ea
- Manual reference position return	
- Program number search	
- Reference position setting without dog	
- Sequence number search	
- Single block	

INTERPOLATION FUNCTIONS

- Nano interpolation	
- Positioning	G00
- 1st. Reference position return	Manual, G28
- 2nd. reference position return	G30
- Circular interpolation	G02
- Continuous threading	
- Cylindrical interpolation	
- Dwell (per sec)	G04
- Linear interpolation	G01
- Multiple threading	
- Polar coordinate interpolation	
- Helical interpolation	
- Reference position return check	G27
- Skip	G31
- Thread cutting / Synchronous cutting	
- Thread cutting retract	
- Torque limit skip	

FEED FUNCTION

- Automatic acceleration / deceleration	
- Cutting feedrate clamp	
- Feed per minute	
- Feed per revolution	
- Feedrate override (10% unit)	0 - 200 %
- Jog feed override (10% unit)	0 - 2000 mm/min
- Manual per revolution feed	
- Override cancel	
- Rapid traverse override	F0, 25, 100 %
- Tangential speed constant control	

AUXILIARY / SPINDLE SPEED FUNCTION

- Spindle orientation	
- Actual spindle speed output	
- Auxiliary function lock	
- Constant surface speed control	
- M-code function M3 digits	M3 digits
- Multi spindle control	
- Rigid tapping	
- S-code function	S4 / S5 digits
- Spindle serial output	S4 / S5 digits
- Spindle speed override	0 - 150 %
- Spindle synchronous control	

PROGRAM INPUT

- Absolute / incremental programming	
- Addition of custom macro common variables	#100~#199, #500~#999
- Automatic coordinate system setting	
- Canned cycle for drilling / Turning	
- Canned cycle	
- Circular interpolation by R programming	
- Control in/out	
- Coordinate system setting	G50
- Coordinate system shift	
- Custom macro	
- Decimal point programming / Pocket calculator type decimal point programming	
- Diameter/radius programming	(X axis)
- Direct drawing dimension programming	
- Direct input of coordinate system shift	
- G code system A	
- G code system B/C	
- Input unit 10 time multiply	
- Label skip	
- Macro executor	
- Manual absolute on and off	
- Maximum program dimension	±9 digit
- Multiple repetitive canned cycle	G70 - G76
- Multiple repetitive canned cycle II	
- Optional block skip	9 piece
- Parity check	
- Plane selection	G17, G18, G19
- Program file name	32 characters
- Program stop / end(M00, M01 / M02, M30)	
- Programmable data input	G10
- Sequence number	N8 digit
- SUB program call	10 folds nested
- Tape code : ISO / EIA auto recognition	EIA auto recognition
- Tape format for FANUC Series15	
- Work coordinate system	G52 - G59

TOOL FUNCTION / TOOL COMPENSATION

- Automatic tool offset	
- Direct input of offset value measured	
- Direct input of offset value measured B	
- T-code function	T2+2 digits
- Tool geometry / wear compensation	
- Tool life management	
- Tool Load Monitoring system *	
- Tool nose radius compensation	G43, G44, G49
- Tool offset	
- Tool offset pairs	±6 digits : 32 pairs
- Tool offset value counter input	
- Y-axis offset	

EDITING OPERATION

- Back ground editing	
- Extended part program editing	
- Memory card edit & operation	
- Number of registered programs	500 ea

FEED FUNCTION

- Part program editing	
- Part program storage size	640 (256 Kbyte) m
- Program protect	

SETTING AND DISPLAY

- Actual cutting feedrate display	
- Alarm display	
- Alarm history display	
- Current position display	
- Periodic maintenance screen	
- Display of spindle speed and T code at all screens	
- Help function	
- Multi-language display	
- Operation history display	
- Parameter setting and display	
- Program comment display	31 characters
- Run hours / part count display	
- Self-diagnosis function	
- Servo setting screen	
- Spindle setting screen	
- Status display	
- Operating monitor screen	
- Servo waveform display	

DATA INPUT / OUTPUT

- External key input	
- External data input	
- External work number search	15 points
- Memory card input/output	
- Reader/puncher interface	CH1.interface
- RS232C interface	
- Automatic data backup	
- Screen hard copy	

OTHERS

- Cycle start and lamp	
- Display unit	10.4" Color LCD
- Feed hold and lamp	
- NC and servo ready	
- PMC system	31iA-PMC
- Reset / rewind	

INTERFACE FUNCTION

- Ethernet function	Embedded ethernet
---------------------	-------------------

OPERATION GUIDANCE FUNCTION

- EZ Guide (Conversational Programming Solution)
--

OPTIONAL SPECIFICATIONS

AXIS CONTROL

- Stored stroke 2 and 3
- Stroke limit check before move

OPERATION

- DNC operation(Reader/puncher interface is required)
- Manual handle feed
- 2 units
- Manual handle interruption
- Reference position shift
- Tool retract and recover

INTERPOLATION FUNCTIONS

- 3rd / 4th reference point return
- Circular threading
- Multi step skip
- Polygon machining with two spindle
- Variable lead threading

FEED FUNCTION

- External deceleration
- Feed stop
- AI Contour control I
(Look-ahead block no. is Max.30) G5.1 Q1

AUXILIARY / SPINDLE SPEED FUNCTION

- Addition of workpiece coordinate system pair	48 pairs
- Automatic corner override	
- Interruption type custom macro	
- Optional block skip (Soft operator's panel)	9 pieces
- Pattern data input	
- Work coordinate system preset	

TOOL FUNCTION / TOOL COMPENSATION

- Addition of tool pairs for tool life management	128 pairs
- Tool offset pairs	64 / 99 / 400 / 999 pairs

EDITING OPERATION

- Number of registered programs	1000 (512KB) ea
- Part program storage length	1280 / 2560 / 5120 m
- Play back	

SETTING AND DISPLAY

- Directory display of floppy cassette
--

DATA INPUT/OUTPUT

- Fast ethernet / Data server	Only for 1 path
- Remote buffer	Only for 1 path

ROBOT INTERFACE

- Robot Interface with PMC I/O module}	
(Hardware between PMC I/O modules)	
- Robot interface with PROFIBUS-DP	

[] : PUMA 2100/2600 SY/LSY only

* : According to the business contract made Doosan,
some regions have
"Tool Load Monitoring system" as option.

NC Unit Specifications

DOOSAN-Fanuc i series

AXES CONTROL

- Controlled path	1 path [2 path]
- Controlled axes	X, Z, C, Y [C2, B]
- Simultaneous controlled axes	4 axes
- Axis control by PMC	
- Backlash compensation	0 ~ ±9999 pulses
- Backlash compensation for each rapid traverse and cutting feed	
- Chamfering on / off	
- Cs contouring control	
- HRV2 control	
- Least input command	0.001 / 0.0001 mm/inch
- Machine lock	All axis / each axis
- Mirror image	
- Overtavel	
- Stored pitch error compensation	
- Stored stroke check 1	
- Chuck and tail stock barrier	
- Stored stroke 2 and 3	
- Stroke limit check before move	
- Torque control	

OPERATION

- Automatic operation (memory)	
- MDI operation	
- DNC Operation with Memory card	
- Dry run	
- Handle incremental feed	X1, X10, X100
- Program restart	
- Wrong operation prevention	
- JOG feed	
- Manual handle feed	1unit
- Manual intervention and return	
- Manual reference position return	
- Program number search	
- Reference position setting without dog	
- Sequence number search	
- Single block	
- DNC operation (Reader / puncher interface is required)	
- Manual handle interruption	
- Reference position shift	

INTERPOLATION FUNCTIONS

- Nano interpolation	
- Positioning	G00
- 1st. Reference position return	Manual, G28
- 2nd. reference position return	G30
- Circular interpolation	G02
- Continuous threading	
- Cylindrical interpolation	
- Dwell (per sec)	G04
- Helical interpolation	
- Linear interpolation	G01
- Multiple threading	
- Polar coordinate interpolation	
- Reference position return check	G27
- Skip	G31
- Thread cutting / Synchronous cutting	
- Thread cutting retract	
- Torque limit skip	
- 3rd / 4th reference point return	
- Polygon machining with two spindle	
- Variable lead threading	

FEED FUNCTION

- Automatic acceleration / deceleration	
- Cutting feedrate clamp	
- Feedrate override (10% unit)	0 - 200 %
- Jog feed override (10% unit)	0 - 2000 mm/min
- Override cancel	
- Rapid traverse override	F0, 25, 100 %

AUXILIARY / SPINDLE SPEED FUNCTION

- Spindle orientation	
- Actual spindle speed output	
- Auxiliary function lock	
- Constant surface speed control	
- M-code function	M3 digits
- Multi spindle control	
- Rigid tapping	
- S-code function	S4 / S5 digits
- Spindle serial output	S4 / S5 digits
- Spindle speed override	0 - 150 %
- [Spindle synchronous control]	

PROGRAM INPUT

- Absolute / incremental programming	
- Addition of custom macro common variables	#100~#199, #500~#999
- Automatic coordinate system setting	
- Canned cycle for drilling / Turning	
- Circular interpolation by R programming	
- Coordinate system setting	G50
- Custom macro	
- Pocket calculator type decimal point programming	
- Diameter/radius programming (X axis)	
- Direct drawing dimension programming	
- Direct input of coordinate system shift	
- G code system A / B / C	
- Label skip	
- Macro executor	
- Manual absolute on and off	
- Maximum program dimension	±9 digit
- Multiple repetitive canned cycle	G70 - G76
- Multiple repetitive canned cycle II	
- Optional block skip	9 piece
- Parity check	

- Plane selection	G17, G18, G19
- Program file name	32 characters
- Program stop / end (M00, M01 / M02, M30)	
- Programmable data input	G10
- Sequence number	N8 digit
- SUB program call	10 folds nested
- Work coordinate system	G52-G59
- Interruption type custom macro	
- Optional block skip	9 piece
- Pattern data input	

TOOL FUNCTION / TOOL COMPENSATION

- Automatic tool offset	
- T-code function	T2+2 digits
- Tool geometry / wear compensation	
- Tool life management	
- Tool Load Monitoring system *	
- Tool nose radius compensation	
- Tool offset	G43, G44, G49
- Tool offset pairs	±6 digits : 64 pairs

- Tool offset value counter input

- Y-axis offset

EDITING OPERATION

- Number of registered programs	400 ea
- Part program editing	
- Part program storage size	1280m (512KB)
- Play back	

SETTING AND DISPLAY

- Alarm history display	
- Multi-language display	
- Program comment display	31 characters
- Run hours / part count display	
- Self-diagnosis function	
- Operating monitor screen	

DATA INPUT / OUTPUT

- External work number search	15 points
- Memory card input/output	
- RS232C interface	
- Automatic data backup	
- Screen hard copy	

OTHERS

- Cycle start and lamp	
- Display unit	10.4" Color LCD
- Feed hold and lamp	
- MDI unit	
- NC and servo ready	
- PMC system	

INTERFACE FUNCTION

- Ethernet function	Embedded ethernet
---------------------	-------------------

OPERATION GUIDANCE FUNCTION

- EZ Guide (Conversational Programming Solution)	
--	--

OPTIONAL SPECIFICATIONS

INTERPOLATION FUNCTIONS

- Multi step skip	
-------------------	--

FEED FUNCTION

- Advanced preview control	
----------------------------	--

TOOL FUNCTION / TOOL COMPENSATION

- Tool offset pairs	99 / 200 pairs
---------------------	----------------

DATA INPUT / OUTPUT

- Fast ethernet / Data server	Only for 1 path
-------------------------------	-----------------

ROBOT INTERFACE

- Robot interface with PMC I/O module	
(Hardware between PMC I/O modules)	

- Robot interface with PROFIBUS-DP	
------------------------------------	--
